

SIGNHIFY STUDIO — MASTER BLUEPRINT

FULL A.I. ENGINEERING STUDIO · PRODUCTION SYSTEMS, PORTFOLIO & PROMPT VAULT

1. Executive Positioning: The Full A.I. Engineering Studio

*Signhify Studio is not a conventional marketing agency. We are a **FULL A.I. ENGINEERING STUDIO**. Traditional agencies sell billable human hours and manual guesswork. We engineer zero-marginal-cost software systems, autonomous multi-agent workflows, production RAG pipelines, and self-hosted publishing machines that compound enterprise attention 24/7.*

2. Live Systems & Production Portfolio

Inspect our verified, battle-tested software systems operating in production today:

Production System	Core Architecture	Verification / Access
Autogram Engine	Zero-touch publishing engine: RSS/HN ingestion, LLM scoring, Playwright rendering (1080×1350), automated Graph API feed drops (7 Carousels / Day).	github.com/Warriorlegacy/Autogram
Autonomous Video Pipeline	9:16 vertical short-form generator: Pexels portrait stock, Edge-TTS neural voiceover, burned Anton subtitles, FFmpeg concatenation (10 Videos / Day).	Live Reel: instagram.com/signhify.studio
In-House Auto-DM Funnel	Self-hosted replacement for ManyChat: Meta Graph API private replies, keyword triggers (FOSS, PROMPT, BLUEPRINT), and 2-step follower-gating.	Autonomous background daemon
Mission Control Cockpit	Real-time glassmorphism Flask dashboard: multi-provider LLM failover telemetry, scheduler status, and live prompt testing.	autogram-dashboard.onrender.com/dashboard
Theme-Reactive 3D Web Engine	Modern immersive 5-theme web experience (quantum, cyberpunk, neumorphic, swiss, bento) with interactive ROI simulator.	autogram-ai.vercel.app

3. Studio Ecosystem & Live Hubs

Hub / Destination	URL	Role in Ecosystem
Studio Home	https://signhify.studio	Official Studio Portal: Services, Case Studies & Inquiries
Product Engine	https://autogram-ai.vercel.app	Live Interactive Showcase & Enterprise ROI Simulator
Mission Control	https://autogram-dashboard.onrender.com	Live Pipeline Telemetry, Health Checks & Scheduler Daemon
Open-Source Core	https://github.com/Warriorlegacy/Autogram	Open Architecture, Documentation & Autonomous Workflows

4. The Zero-Marginal-Cost Autonomous Stack (\$0/Month)

How Signhify Studio runs high-throughput autonomous media pipelines with \$0 recurring cloud infrastructure fees:

Layer	Tool / Provider	Operating Cost	Capability & Quota
LLM Reasoning	Gemini 2.5 Flash / Groq / Ollama	\$0.00	14.4k req/day free tier + unlimited local compute
AI Voiceover	Microsoft Edge-TTS Neural	\$0.00	Studio-grade multilingual neural voices, zero API keys
Stock Footage	Pexels Video Search API	\$0.00	4K/HD portrait video clips with 200 req/hr allowance
Assembly Engine	FFmpeg + MoneyPrinterTurbo	\$0.00	Hardware-accelerated 1080x1920 MP4 rendering
Public Staging	Uguu.se / Catbox / Cloudflare R2	\$0.00	High-speed direct CDN endpoints for Meta ingestion

Publishing API	Meta Graph API (v23.0)	\$0.00	Direct container publishing (carousels, stories, reels)
Cloud Scheduler	GitHub Actions Cloud Runners	\$0.00	2,000 free runner minutes/month (PC-off proof)

5. The Master Production Prompt Pack

Deploy these copy-paste system prompt architectures directly in your workflows:

PROMPT 1: The AI Infrastructure & SaaS Auditor

Audit every paid subscription and API bill in [TARGET_WORKFLOW]. For each tool, identify the single highest-rated self-hosted FOSS or local AI alternative. Return license, GitHub stars, 1-line Docker deployment command, hardware RAM requirements, and net annual dollar savings. Rank by ROI.

PROMPT 2: The Chain-of-Density Knowledge Synthesizer

Read [INPUT_SOURCE]. Produce a 5-sentence technical summary. Then execute 3 iterative compression passes. In each pass, add 3-5 missing domain entities and technical metrics while maintaining exact character length. Output only the final hyper-dense, zero-fluff synthesis.

PROMPT 3: The 50-Second Viral Short-Form Video Machine

Write a 50-second spoken Reels narration about [TECHNICAL_TOPIC]. Format: 3-second hook (violates an established industry assumption), Beat 1 (the underlying architectural flaw), Beat 2 (the breakthrough implementation with proof metric), Beat 3 (tactical command/code takeaway), CTA (comment [KEYWORD] to receive the repository). Length: 110-125 words.

PROMPT 4: The Contrarian Architecture Formulator

Provide 5 contrarian, defensible architectural principles regarding [ENGINEERING_DOMAIN] that senior principal engineers strongly validate but junior developers routinely argue against. For each principle, supply the 1-sentence first-principles rationale and 1 real-world failure mode.

PROMPT 5: The Enterprise High-Ticket Offer Architecture

Deconstruct [CLIENT_AI_PROBLEM]. Architect a 3-tier enterprise solution: Tier 1 (Self-hosted POC & audit), Tier 2 (Custom Agentic Pipeline & RAG System with SLA), Tier 3 (Fully Managed Zero-Marginal-Cost Autonomous Engine). Define deliverables, timeline, risk reversal, and pricing anchor.

6. Partner with Signhify Studio (Hire the Engineering Team)

We engineer custom autonomous systems for founders, creators, and enterprise teams who demand leverage over labor:

Studio Capability	Deliverables & Impact	Deployment Time
Autonomous Content Engines	Zero-touch multi-platform machines (Carousels, Stories, Reels) with automated research, rendering, and auto-DM lead capture.	7 – 10 Days
Custom Agentic Workflows	Production multi-agent systems, document ingestion RAG pipelines, internal tooling automations, and CRM integrations.	2 – 3 Weeks
Private Model Deployments	On-premise / private cloud LLM serving (DeepSeek, Llama 3, vLLM, Ollama) with strict data privacy and zero API leakage.	1 – 2 Weeks

READY TO DEPLOY YOUR AUTONOMOUS SYSTEM?

Direct Message the word **STUDIO** to **@signhify.studio** on Instagram, or initiate your project directly at <https://signhify.studio>.
